

This is your personal Invitation from
The Irish Climate Science Forum (ICSF, www.ICSF.ie)
And **Climate Intelligence (CLINTEL, www.CLINTEL.org)**
To our next lecture on the topic of:

“The Imaginary Climate Crisis – How can we Change the Message?”

To be given by
Professor Emeritus Richard S Lindzen

Professor Emeritus Richard S Lindzen is a world-renowned dynamical meteorologist with interests in the broad topics of climate, planetary waves, monsoon meteorology, planetary atmospheres and hydrodynamic instability. His research involved studies of the role of the tropics in mid-latitude weather and global heat transport, the moisture budget and its role in global change, the origins of ice ages, seasonal effects in atmospheric transport, stratospheric waves, and the observational determination of climate sensitivity. He has published more than 200 scientific papers and books. From 1983, when he joined the faculty at MIT, until he retired in 2013, he was Alfred P. Sloan Professor of Meteorology. He has received numerous prestigious awards, including Phi Beta Kappa, Sigma Xi and is a Fellow of several US and international learned Societies.

***To be held by Zoom on Wed, March 31, 2021,
at 7pm Dublin Time***

Abstract: Prof Lindzen will discuss the communication problems in demonstrating the absurdity of treating climate as an existential threat. It is clear that punching holes in the arguments of those supporting this narrative has hitherto been of limited effectiveness. The consequence is that the Western World is now pursuing climate/energy policies that will lead to major misallocation and wastage of precious resources and yet do nothing for global climate. Accordingly, Prof Lindzen will suggest some alternative approaches, and will welcome suggestions from our international audience in open discussion after his thought-provoking presentation.
