

Christmas Message to World Leaders

Don't fight climate change, fight real problems

Your Excellencies,

Compared to global problems like poverty and health, climate change is a nonissue! Using computer models, alarmists frighten the world population already for decades with a so-called climate crisis, but hard facts show that this crisis just does not exist. Please, read CLINTEL's COP26 Trilogy:

<https://clintel.org/a-poignant-message-of-clintel-to-those-who-attended-cop26/>

Don't continue pushing your zero-CO₂ emission ambition in a time that the world is struggling with many real problems. Specific example for today: "Don't fight CO₂, fight Corona".

This was the fear-mongering message of these gentlemen on last November 30 : "Unchecked, climate change will bring devastating outcomes like droughts, famines, floods, heat waves, collapse of ecosystems and mass dislocations." Gentlemen, if your "Existential Crisis" would exist, it is not due to climate change but it is due to your nonsensical public policies.

World leaders must dispense with their frightening narrative that climate change causes a "Existential Crisis" (e.g., see above event). Don't link extreme weather to human-caused CO₂ emission and stop spreading disinformation on the necessity of total lockdowns! Instead, spread hope and truth. As a very first step, designated Green New Deal money must be redirected and invested in real problems. Release people from poverty and invest in serious health issues, such as the COVID-19 pandemic.

World Climate Declaration

The past 150 years show that affordable and reliable energy is key to financing basic needs, such as food, health, sanitation, housing, electricity and education. The past 150 years also show that more CO₂ is beneficial for nature, greening the Earth and increasing the yields of crops. Why do world leaders ignore these hard facts? Why do world leaders do the opposite with their Green New Deal and lower the quality of life by forcing high-cost, dubious low-carbon energy technologies upon their citizens? To get it their way, fear is used but fear has never led to sensible policies.

Your Excellencies, please look at the World Climate Declaration (WCD) of CLINTEL:

<https://clintel.org/wp-content/uploads/2021/10/WCD-A4version1008212.pdf>

This Declaration states that the climate crisis is not caused by the Earth's climate, but that it is caused by your climate policies. The Declaration also states that climate change exists and must be addressed, but it emphasizes that there is NO cause for panic and alarm. CLINTEL strongly opposes your destructive and unrealistic global net-zero CO₂ policy ('NetZero'). Instead, the aim of any global policy should be 'prosperity for all' by providing reliable and affordable energy at all times. In a prospering society men and women are well educated, birthrates are low and people care about their environment. They are good stewards.

Great Barrington Declaration

The Great Barrington Declaration addresses the COVID-19 pandemic and has a very similar message as the WCD. Yes, the COVID-19 pandemic exists and must be addressed, but there is NO cause for panic and alarm. Disruptive lockdowns, chaotic situations in hospitals, lack of medicines and insufficient vaccines to support weak immunities are caused by bad health policies. The Declaration states that adopting measures to protect the vulnerable should be key in all public health responses ('focused protection'):

<https://gbdeclaration.org>

Hence, comprehensive knowledge about the vulnerable groups in society (who are they?) is indispensable in fighting COVID-19. Those who are not vulnerable should be allowed to resume life as normal. Meanwhile, it is highly desirable to start an open reporting system that provides us with an honest overview of the side effects and adverse reactions of medicines and vaccines. And above all, we must invest in a better understanding of virus transmission. In this pandemic, physicians determine the policy, but where are the physicists? **The society urgently needs a taskforce virus transmission.**

My Christmas message to world leaders

Climate change is largely caused by natural primordial forces and the dynamics of a pandemic is largely caused by natural virus mutations. They have in common that both are of all time and that both can only be modestly controlled by mankind. With all respect, your policies have made the situation worse instead of better (your cure is worse than the disease). Why don't you think in terms of cost and benefit? Be aware, the trust in you and your organizations is rapidly disappearing!

My advice to you is: "Spend the intended climate trillions not on NetZero, but invest in global monitoring networks for early detection, make organizations flexible to adapt fast, focus on the vulnerable and develop new technology." In climate policies that means adaptation technology for protection against extreme weather conditions. In COVID-19 policies that means adaptation technology for transmission-blocking mechanisms (like ionizing air cleaners), effective medicines and safe broad-spectrum vaccines for the vulnerable. With such a comprehensive approach, lockdowns are out of the question. Bear in mind, in pandemics people are the victims and people are the sources of infection, creating a positive feedback system.

The above also implies a Christmas message to the growing number of extremist organizations. Please, look at all facts, deepen your understanding and use your common sense. Stop frightening the world, stop polarizing societies and stop disrupting our democracies! My advice to each of you is: "Don't be an alarmist and don't be a denier either".

Let's restore trust

Your Excellencies, to conclude, be responsible to current and future generations and stop your Green New Deal plans. Your CO₂ budgets and total lockdowns are based on fear; they limit human rights, feed extremism and push mankind into a deep physical, mental and financial crisis. The urgent message from citizens to all of you is: "We don't want to live in a culture of fear".

Instead of squandering trillions to a problem that does not exist, let us collaborate and release people from poverty, solve global health issues such as the corona pandemic, invest more in science and education and, above all, take better care of all life on our unique planet.

Yours sincerely,

Guus Berkhout
